

EDUCATION AND TRAINING

## CyberSecPro Training

We are creating cutting-edge education and training to advance competencies and professionalism in EU cybersecurity.

OUR VISION

### Next level cybersecurity education and training

# Human Factors and Energy Sector Cybersecurity

## CSP001\_C\_E

PRESENTATION BY:

DR. RICARDO G. LUGO, TALTECH

DR. KITTY KIOSKLI, TRUSTILIO

PROF. PARESH RATHOD, LAUREA

CyberSecPro creates cutting-edge education and training materials and courses to advance competencies and professionalism in EU cybersecurity.

Funded by  
the European Union

Funded by the European Union. Views and opinions expressed are however those of the author(s) only and do not necessarily reflect those of the European Union or HADEA. Neither the European Union nor the granting authority can be held responsible for them.

Project Agreement no. 101083594

# Agenda

Learning outcomes

Psychological aspects of Cybersecurity in Energy sector

Psychosocial aspects

Future trends

# Goals: Who-What-Why you need to take this training

## WHO

Open to all

## WHAT

Foundation understanding of Human Factors for cybersecurity in energy sector

## WHY

Equipping participants with the knowledge and skills necessary to understand how human aspects influence in energy sector cybersecurity

# Benefits to Participants

- Level of Training Module: Basic
- Cybersecurity Professional Training
- Rooted with European Cybersecurity Skills Framework
- Cutting-edge insights from industry-academic experts
- Helps with skills development and career advancement

# Training Topics

- Introduction to Human Aspects of Energy Sector Cybersecurity
- Psychological and Social Factors in Energy Sector Cybersecurity
- Human Vulnerabilities in Energy Sector Cybersecurity
- Organisational Culture, Communication, and Cybersecurity
- Communication and Collaboration Across Domains
- Decision Making at Strategic, Operational, and Tactical Levels
- Training, Awareness, and Communication Programs for Energy Sector Personnel
- Future Trends, Challenges, and the Role of

# Learning Outcomes

## Knowledge

- Gain an understanding of the psychological, social, and organizational elements that shape cybersecurity actions within the Energy Sector.
- Understand the critical role of communication and teamwork in bolstering energy sector cybersecurity across different sectors.
- Recognize the profiles and strategies of adversaries targeting energy sector operations.

# Learning Outcomes

## Competencies

- Understand the discussions relevant to energy sector cybersecurity at various levels of decision-making.
- Be able to foster an environment of transparent communication and teamwork focused on energy cybersecurity.
- Reflect on cybersecurity decision-making with an awareness of how human factors play a role in the energy sector.
- Be able to identify human-centric threats and vulnerabilities in energy operations.

# Importance of Human Factors:

## Overview of Energy Sector Cybersecurity

- Importance of cybersecurity in energy sector operations.
- Unique cybersecurity challenges in the energy sector.
- Role of human factors in energy sector cybersecurity.
- Identified Threats:
  - IT/OT conversion
  - Low priority and confidence
  - 2023: 250+ 3<sup>rd</sup> party breaches
- Examples that will be used:
  - Ukrainian Power Grid Attack 2015
  - Colonial Pipeline
  - Stuxnet

- Raise your hand if you have:
  - Clicked on a link (from anyone)
  - Have a complex passphrase (?)
  - Use the same password on different sites/apps
  - Haven't changed your password in the last 30 days
  - Given your phone/pc to someone else to use
  - Have simple login to phone/pc
  - Not updated pc/phone in last 7 days

# Importance of Human Factors:

## Psychological Implications

- Psychological aspects influencing cybersecurity behaviours.
- The effect of cognitive biases on security decisions.
- Implementing psychological principles to enhance cybersecurity measures.

# Cognitive Dissonance - Cognitive

“3.1.1 NameDrop Data [...] Any and all data generated and/or collected by NameDrop, by any means, may be shared with third parties. For example, NameDrop may be required to share data with government agencies, including the U.S. National Security Agency, and other security agencies in the United States and abroad. NameDrop may also choose to share data with third parties involved in the development of data products designed to assess eligibility. This could impact eligibility in the following areas: employment, financial service (bank loans, insurance, etc.), university entrance, international travel, the criminal justice system, etc. Under no circumstances will NameDrop be liable for any eventual decision made as a result of NameDrop data sharing.”

P)?

2.3.1 Payment types (child assignment clause): In addition to any monetary payment that the user may make to NameDrop, by agreeing to these Terms of Service, and in exchange for service, all users of this site agree to immediately assign their first-born child to NameDrop, Inc. If the user does not yet have children, this agreement will be enforceable until the year 2050. All individuals assigned to NameDrop automatically become the property of NameDrop, Inc. No exceptions.

# Importance of Human Factors:

## Social Influence

- Impact of social dynamics on cybersecurity practices.
- Role of organizational culture in shaping cybersecurity behaviours.
- Importance of social engineering awareness.

# Importance of Human Factors:

## Social Engineering

- Importance of social engineering awareness.
- Social Engineering
- Reciprocity; Commitment and Consistency, Social Proof; Authority; Liking; Scarcity

WORDS

SECURITY

Wana Decrypt0r 2.0

**Oops, your files have been encrypted!**

English

### What Happened to My Computer?

Your important files are encrypted. Many of your documents, photos, videos, databases and other files are no longer accessible because they have been encrypted. Maybe you are busy looking for a way to recover your files, but do not waste your time. Nobody can recover your files without our decryption service.

### Can I Recover My Files?

Sure. We guarantee that you can recover all your files safely and easily. But you have not so enough time. You can decrypt some of your files for free. Try now by clicking <Decrypt>. But if you want to decrypt all your files, you need to pay. You only have 3 days to submit the payment. After that the price will be doubled. Also, if you don't pay in 7 days, you won't be able to recover your files forever. We will have free events for users who are so poor that they couldn't pay in 6 months.

### How Do I Pay?

Payment is accepted in Bitcoin only. For more information, click <About bitcoin>. Please check the current price of Bitcoin and buy some bitcoins. For more information, click <How to buy bitcoins>. And send the correct amount to the address specified in this window. After your payment, click <Check Payment>. Best time to check: 9:00am - 11:00am

**Payment will be raised on**  
5/16/2017 00:47:55  
Time Left  
02:23:57:37

**Your files will be lost on**  
5/20/2017 00:47:55  
Time Left  
06:23:57:37

# Psychological and Social Factors in Energy Sector Cybersecurity

## Understanding Human Psychology

- Cognitive biases and their impact on cybersecurity.
- Psychological theories relevant to cybersecurity behaviour.
- Designing cybersecurity systems with human psychology in mind.
  - Situational Awareness (Endsley, 1998)
- An interface redesign that reduced user errors based on psychological research.

# Cyber situational awareness (CSA) (Barford et al., 2009)

# Psychological and Social Factors in Energy Sector Cybersecurity

## Social Dynamics and Cybersecurity

- Influence of social norms and peer behaviour on individual cybersecurity practices.
- The role of leadership in fostering a security-conscious culture.
  - Role Modelling (Bandura, 1988)
- Social factors in cybersecurity training and awareness programs.

# Psychological and Social Factors in Energy Sector Cybersecurity

## Enhancing Security Through Psychology

- Psychological strategies to increase security protocol adherence.
- Behavioural change techniques applied to cybersecurity.
- The role of motivation and rewards in enhancing cybersecurity behaviours.
- Real-world example: A rewards program that successfully increased cybersecurity vigilance among engineers.
- Future BCT using AI

# Psychological and Social Factors in Energy Sector Cybersecurity

## Addressing Social Engineering Threats

- Understanding social engineering tactics from a psychological perspective.
- Training personnel to recognize and respond to social engineering attacks.
- Building a culture of scepticism, vigilance and verification.
- Real-world example: A company's response to a spear-phishing campaign targeting executives.

# Perceived Vulnerability As a Determinant of Increased Risk for Cybersecurity Risk Behavior

## What we think we know about cybersecurity: an investigation of the relationship between perceived knowledge, internet trust, and protection motivation in a cybercrime context

### Abstract

There is interest in better understanding and ultimately impacted by their perceived and how someone's framework for explaining this victimization is essential to understand human despite increased reliance and in real time yet are still in attitudes and behaviors that consumers sampled from two parts of the Online Security Behavior with an index of perceived vulnerability regression indicated subscale competent enough to understand resulting from a social desirability that knowledge is an essential vulnerability may depend upon

**Keywords:** cybersecurity, perceived

### ABSTRACT

Individual internet users are commonly considered the weakest links in the cybersecurity chain. One reason for this is that they tend to be overoptimistic regarding their own online safety. To gain a better understanding of the cognitive processes involved in this assessment, the current study applies an extended version of the protection motivation theory. More specifically, this study includes perceived knowledge and internet trust to discover how these antecedents influence the threat and coping appraisal processes. Based on representative survey data collected from 967 respondents, we found that people who feel well-informed about online safety feel less vulnerable to cybercrime and are less inclined to take security measures. At the same time, feeling informed is associated with being more convinced of the severity of cybercrime. High levels of trust in the safety of the internet are linked to the feeling that one is less vulnerable to cybercrime and the perception that cybercrime is not a severe threat. Future interventions should remind internet users about their own perceived vulnerability and the risks that exist online while ensuring that internet users do not lose their trust in the internet and confidence in their own online knowledge.

# Social Engineering Personality Framework (SEPF)

- Attack:
- C: rules
- E: Excitement
- A: Many ways in...
- O: Scarcity - restrict freedom
- N: Protective

# Profiles

## Motivations:

1. **Financial Gain:** Many attackers are motivated by financial incentives
2. **Hactivism:** Some attackers engage in cyberattacks to promote a social or political agenda, often using digital means to make a statement.
3. **Curiosity:** Curiosity-driven attackers, often referred to as "script kiddies," explore vulnerabilities for the thrill of it
4. **Espionage:** State-sponsored attackers or cyber spies aim to gather intelligence, classified information, or trade secrets.

## Psychological Characteristics:

1. **Anonymity**
2. **High Intelligence**
3. **Risk-Taking**
4. **Lack of Empathy**

## Attack Techniques:

1. **Phishing:** Attackers often use social engineering techniques to trick individuals into revealing sensitive information or clicking on malicious links.
2. **Malware:** Attackers deploy various types of malicious software, like viruses, worms, and Trojans, to compromise systems and steal data.
3. **Advanced Persistent Threats (APTs):** State-sponsored attackers employ APTs to infiltrate and maintain long-term access to target systems discreetly.

## Psychological Factors:

1. sense of power and control when successfully breaching systems, leading to a cycle of addiction to cybercrime.
2. justify their actions by believing they are exposing vulnerabilities or fighting for a cause they deem just.

# Human Vulnerabilities in Energy Sector Cybersecurity

## Impact of Human Error

- Types of human errors and their consequences for cybersecurity.
- Methods for reducing errors, such as simplification of systems and processes.
- Importance of error reporting and management systems.
- [ENISA](#)

# Human Vulnerabilities in Energy Sector Cybersecurity

## Training to Reduce Human Error

- Role of targeted training programs in addressing specific human vulnerabilities.
- Simulation
- Gamification
- Scenario based learning
- Continuous learning
- The importance of simulation and drills in reinforcing correct behaviours.
- Continuous improvement of training programs based on incident feedback.

# Human Vulnerabilities in Energy Sector Cybersecurity

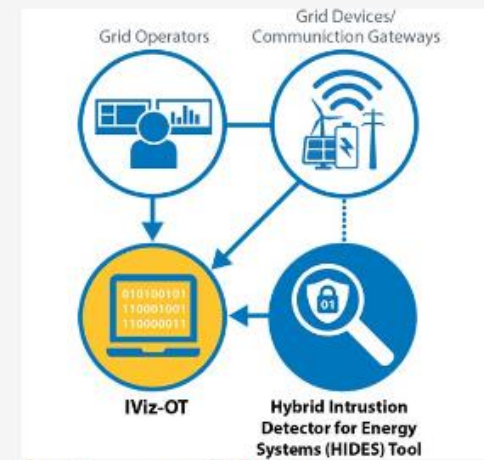

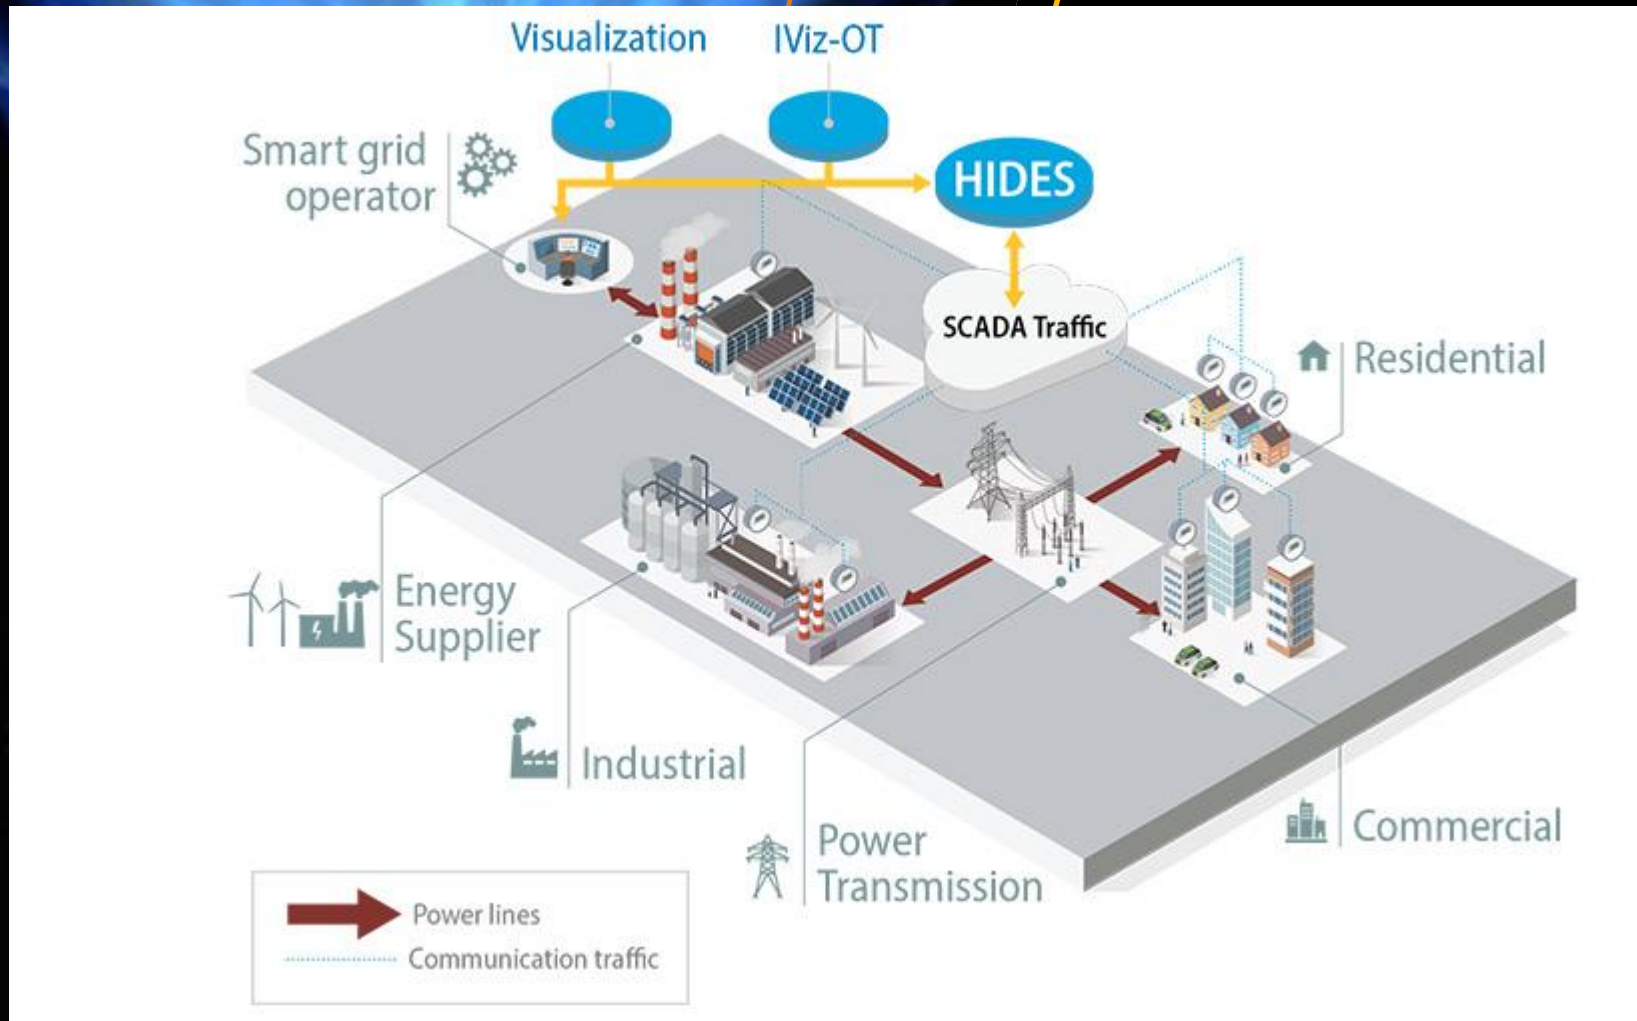

## Enhancing Situational Awareness

- Importance of situational awareness in preventing human errors.
- Endsly
- Perception
- Comprehension
- Projection
- Tools and technologies to support situational awareness in cybersecurity.
- Adapeted viualisations
- Integrating situational awareness into daily operations and decision-making.

# Cyber situational awareness (CSA) (Barford et al., 2009)

# Enhancing Situational Awareness

## Key Features of IViz-OT:

- Visualizes alerts to support situational awareness for grid operators
- Maps alerts to possible scenarios
- Customized application programming interface (API) and supports the integration of alert scenarios and databases
- Compatible with vendor devices.

## Key Features of HIDES:

- Detects both IT- and SCADA-specific attacks
- Aggregates data to integrate cyber logs and grid information
- Visualizes grid on the dashboard to provide situational awareness.

# Organizational Culture, Communication, and Cybersecurity

## Role of Organizational Culture

- Definition and impact of organizational culture on cybersecurity.
- Characteristics of a strong cybersecurity culture.
  - Values (Lencioni, 2002)
  - Adherence and compliance
- Strategies for cultivating a positive cybersecurity culture.
  - Psychological Safety in the Workplace

# Organizational Culture, Communication, and Cybersecurity

## Effective Cybersecurity Communication

- Principles of effective communication in cybersecurity.
- Overcoming barriers to effective cybersecurity communication.
- Role of transparent communication in incident response.
- Post cybersecurity incident

# Organizational Culture, Communication, and Cybersecurity

## Leadership in Cybersecurity Culture

- Building cybersecurity leadership at all levels of the organization.
  - Vertically AND horizontally

# Organizational Culture, Communication, and Cybersecurity

## Fostering Collaboration and Trust

- Defining Collaboration and Trust: *Collaboration in the energy sector involves the sharing of information, resources, and best practices to enhance collective cybersecurity defenses. Trust underpins these collaborative efforts, ensuring that shared information is reliable and that partners will act responsibly with shared data and insights.*
- Importance of trust and collaboration in cybersecurity efforts.
  - Information Sharing
  - Joint Cybersecurity exercises
- Techniques for building trust within and across teams.
  - Alliances, partnerships
- Collaborative approaches to cybersecurity problem-solving.
- Real-world example: Cross-departmental collaboration project that strengthened overall cybersecurity posture.

# ENISA THREAT LANDSCAPE 2022

ENISA REPORT

CSP TRAINING MODULE NAME: HUMAN FACTORS IN CYBERSECURITY FOR ENERGY SECTOR

## Communication and Collaboration Across Domains

### Cross-Domain Cybersecurity Challenges

- Challenges and opportunities in cross-domain cybersecurity collaboration.
- Importance of interoperability and shared standards.
- ENISA, NIS 2
- Strategies for effective cross-domain communication.

# Communication and Collaboration Across Domains

## Building Collaborative Networks

- The role of professional networks and alliances in enhancing cybersecurity.
- Benefits of public-private partnerships in cybersecurity initiatives.
- ESCO
- Leveraging expertise across domains for comprehensive cybersecurity solutions.

# Communication and Collaboration Across Domains

## Collaborative Incident Response

- Principles of collaborative incident response planning.
- Importance of clear roles and communication channels during incidents.
- Benefits of joint exercises and simulations.
- Decision-making under pressure
- Cultural aspects
- Locked-Shields and Energy Sector

# Communication and Collaboration Across Domains

## Overcoming Barriers to Collaboration

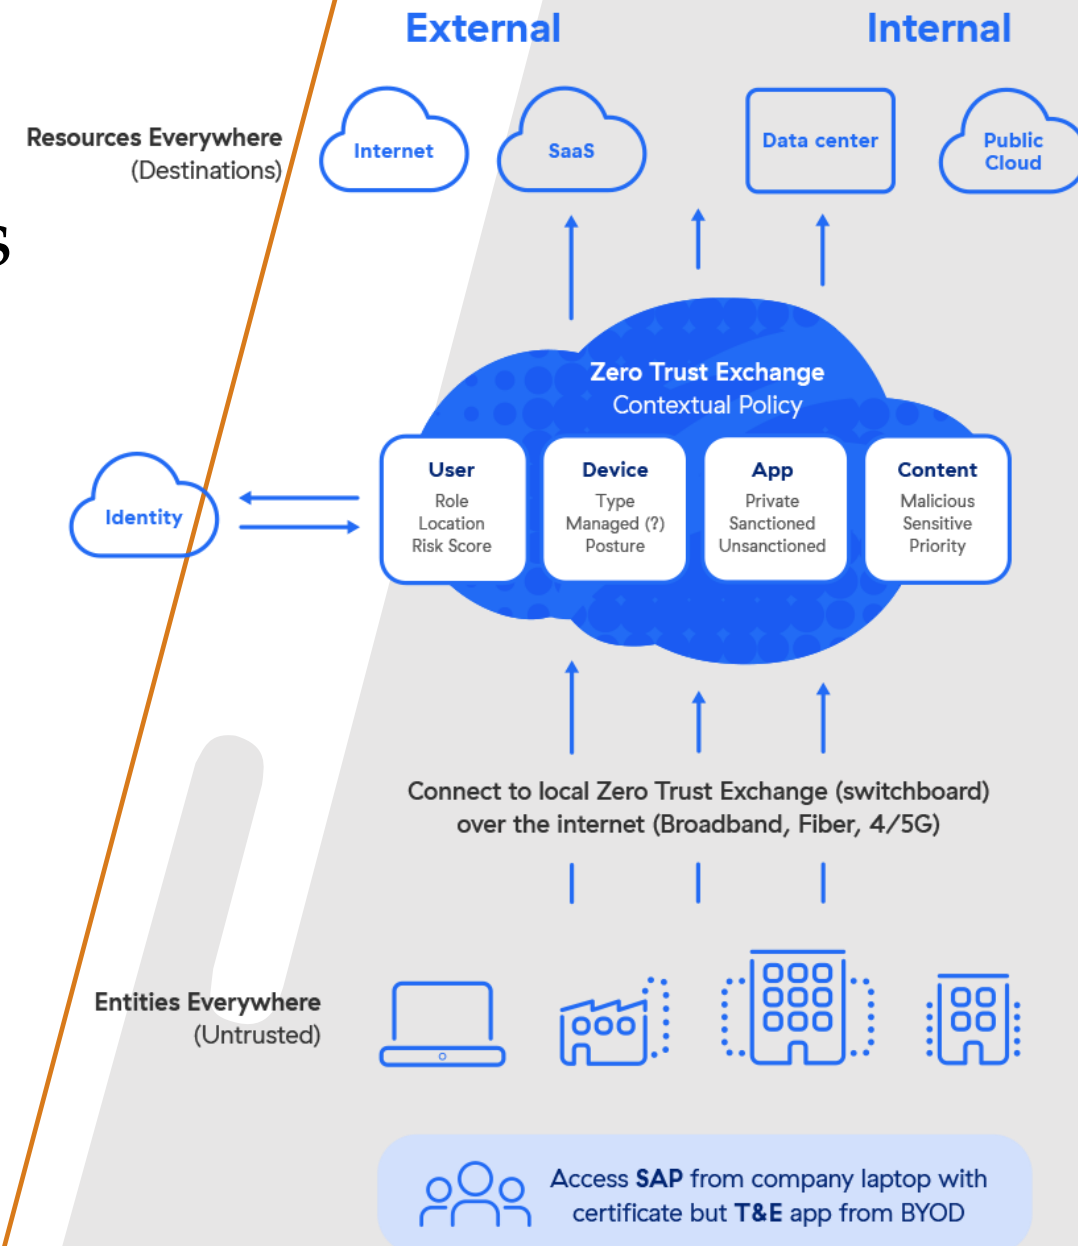

- Common barriers to effective cybersecurity collaboration and how to overcome them.
- The role of trust and transparency in collaborative efforts.
- Best practices for sustaining long-term collaborative relationships.

# Decision Making at Strategic, Operational, and Tactical Levels

## Strategic Decision Making

- Overview of strategic decision-making in energy sector cybersecurity.
- Long-term planning and policy development for robust cybersecurity frameworks.
- Integration of cybersecurity into overall business strategy.
- Real-world example: An energy sector company's strategic decision to adopt a zero-trust architecture.

CSP TRAINING MODULE NAME: HUMAN FACTORS IN CYBERSECURITY FOR ENERGY SECTOR

# Decision Making at Strategic, Operational, and Tactical Levels

## Operational Decision Making

- Role of operational decisions in maintaining day-to-day cybersecurity.
- Operational responses to identified threats and vulnerabilities.
- Coordination between cybersecurity teams and other operational units.
- Real-world example: An operational decision to isolate a compromised system in a plant, preventing a wider breach.

# Decision Making at Strategic, Operational, and Tactical Levels

## Tactical Decision Making

- Nature of tactical decisions in responding to immediate cybersecurity threats.
- Tools and techniques for effective tactical decision-making, including incident response teams and real-time threat intelligence.
- Importance of agility and flexibility in tactical decisions.
- Real-world example: Rapid tactical response to a ransomware attack on a management system.

# Decision Making at Strategic, Operational, and Tactical Levels

## Integrating Decision Levels

- Ensuring coherence and alignment between strategic, operational, and tactical decision-making levels.
- Mechanisms for feedback and learning across decision-making levels.
- Role of leadership in bridging gaps between different decision-making levels.
- Real-world example: Integrated decision-making framework that enabled a seamless response to a coordinated cyber-physical attack.

CSP TRAINING MODULE NAME: HUMAN FACTORS IN CYBERSECURITY FOR ENERGY SECTOR

# Training, Awareness, and Communication Programs for Energy Sector Personnel

## Importance of Training and Awareness

- The critical role of continuous training and awareness in energy sector cybersecurity.
- Elements of effective cybersecurity training programs for personnel.
- The impact of awareness programs on reducing human error and enhancing security culture.

# CYBER SECURITY TRAINING

## Training, Awareness, and Communication Programs for Energy Sector Personnel

### Enhancing Communication for Cybersecurity

- Best practices for communicating cybersecurity policies and incidents to energy sector personnel.
- The role of clear, consistent communication in fostering a proactive cybersecurity stance.
  - Clear Messaging
  - Timely Information Flow
  - Actionable Intelligence
- Strategies for overcoming communication barriers in diverse and dynamic energy sector environments.
  - Multichannel communication

# Training, Awareness, and Communication Programs for Energy Sector Personnel

## Designing Effective Training Programs

- Principles for designing engaging and impactful training programs.
- Habits, Self-efficacy, Metacognition
- Incorporating adult learning theories and methodologies in cybersecurity training.
- Use of simulations and drills in reinforcing learning and preparedness.
- Real-world example: A energy sector academy's use of VR simulations to train cadets on cybersecurity protocols.

# Future Trends, Challenges, and the Role of Communication

## Emerging Cybersecurity Trends

- An overview of emerging trends in cybersecurity, including AI, machine learning, and IoT.
- The implications of these trends for energy sector cybersecurity strategies.
- Preparing for future cybersecurity challenges through innovation and adaptability.
- Real-world example: Adoption of AI-based threat detection systems on smart ships.

# Future Trends, Challenges, and the Role of Communication

## Addressing Future Cybersecurity Challenges

- Anticipating and mitigating new types of cyber threats in the energy sector.
- The importance of staying ahead of the curve through research and collaboration with cybersecurity experts.
- Challenges posed by the increasing complexity and connectivity of energy sector operations.

# Future Trends, Challenges, and the Role of Communication

## The Evolving Role of Communication

- The critical role of effective communication in addressing future cybersecurity challenges.
- Enhancing cross-sector and cross-border communication for a unified response to cyber threats.
- Leveraging new communication technologies and platforms for better threat intelligence sharing.
- Real-world example: Iviz-OT.

# Future Trends, Challenges, and the Role of Communication

## Preparing for the Future

- Strategic planning and investment in cybersecurity capabilities to prepare for future challenges.
- The role of leadership in fostering a forward-looking cybersecurity culture.
- Importance of global cooperation and information sharing in strengthening energy sector cybersecurity resilience.
- Industrial Automation and Control Systems (IACS)
